Settings

Adding a banner to your website
To add the banner block to your website, go to **Site builder > Pages** and select the page you want to add the banner block to.

Manage the banner content
To manage the banner content of your website, such as the site title, subtitle, or logo, go to **Site builder > Brand** and update the brand setting. You can also choose to display the site title, subtitle, or logo on the banner using the settings button on this page.

What is the best size for a banner?
The banner looks best viewed on desktop as a landscape image, and it looks better on mobile as a portrait image. Therefore, you can upload 2 separate images for desktop and mobile viewing. Premade images are already optimized for desktop and mobile.

The recommended image size for a desktop banner is 1920 wide x 480px high and the recommended image size for a mobile banner is 768 wide x 768px high.

How to add the banner images
Click in a box below to upload a banner for desktop or mobile. The file you upload will be automatically saved.

- Green arrow icon: To upload a file, click in the green arrow icon.
- Cropping icon: To crop and edit the image, click in the cropping icon.
- Trash can icon: To delete the file, click in the trash can icon.

Select Pre-Made Banner

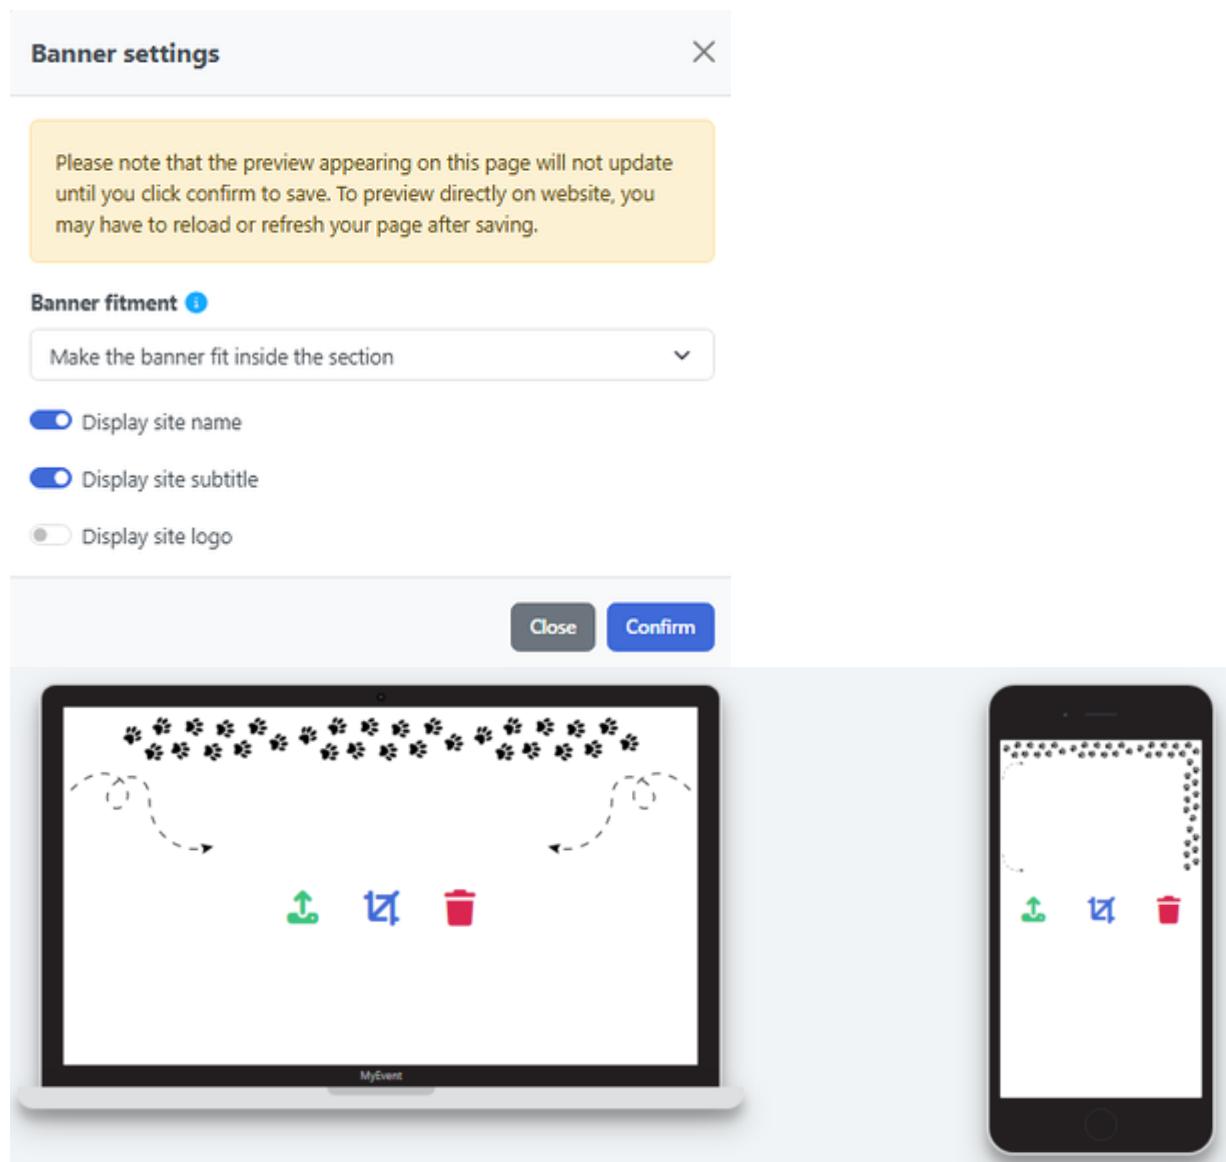

We have a few pre-made banners with multiple categories!

In Settings, you will find the 3 options available. These are the first you will verify after checking the banners.

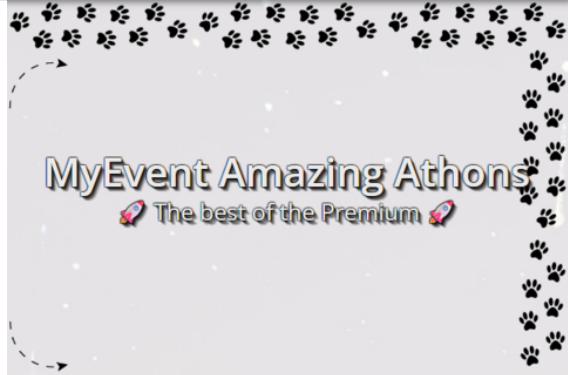

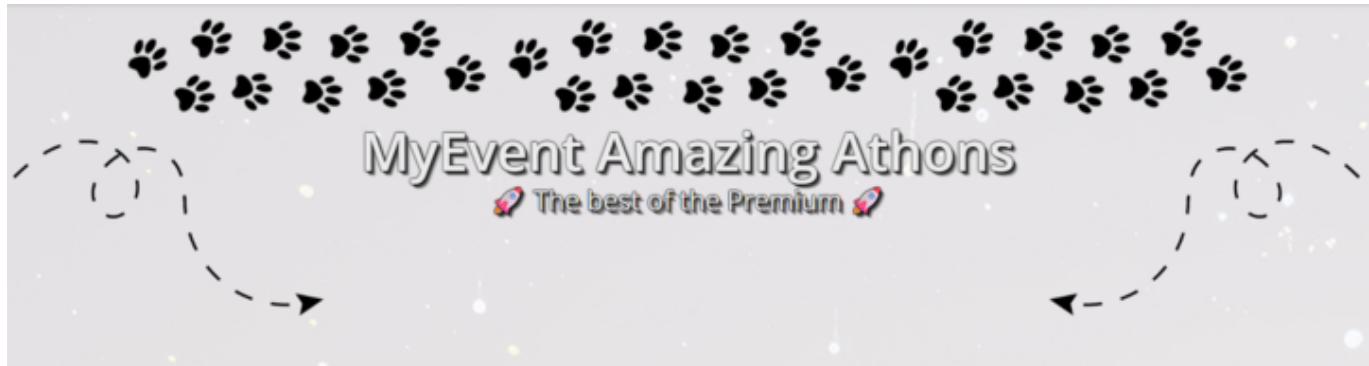

The Site Logo can be added by visiting **Site Builder > Brand**; this one cannot be used at the same time as the titles.

The title and subtitle are also available to be changed on **Site Builder > Brand**.

After selecting the banner for both Desktop and Mobile, this is how they would look on the banner page.

When you visit the website, they will be shown as follows.
